

Scratch se Pipeline Banaenge aur end to end setup baaenge RG bana ke..

Terraform Apply ke pehle manual approval stage lagaenge...

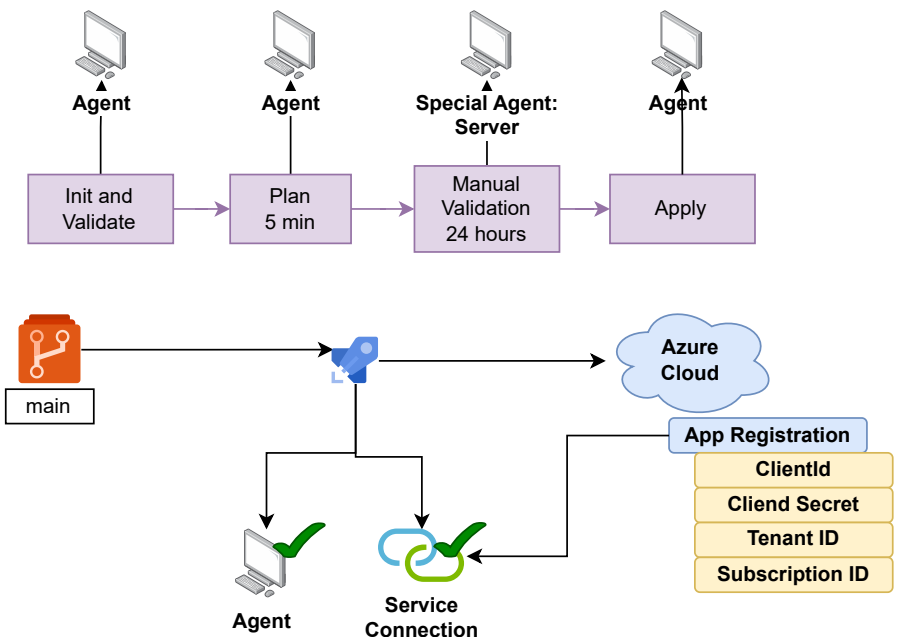

do environment ke lie setup banaenge...

Pipeline ko analyze karege jo jo chiz repeat kr raha hai uske lie variable bana denge...

For Single Pipeline, Variable and multiple pipelines, Variable Groups..

Ek hi Parameterized pipeline se 2 environments me deployment krwa denge..

Jo jo baar baar repeat kr raha hai uske lie template ka baat karenge..

Azure DevOps me Parallism kya hota hai?

Parallel Job and Agent me kya antar hota hai?

Parallelism ke benefits kya hai?

Alg alg stage and alg alg job ko alg alg agent pr chala skte hai..

Production level ke pipeline ka flow, Scan, Init, Plan, Validate, Approval, Apply

Maan lia jae.. Pipeline fail ho raha hai toh kaise troubleshoot karoge?
