

75-80% IT Engineers sab berojgar ho jaega 2-3 saal me..

Kal sb axion ka db and backend setup kar ke aaenge..

1. Infra bana denge... Ek RG, Ek Vnet, 2 Subnet, 2 VM with public ip and postgresql paas service..

Apply complete! Resources: 16 added, 0 changed, 0 destroyed.

2. Database se connect karke, data insert karenge...

3. Telemetry backend service jo python me likha hua hai... isko developer ke saath baith iska readme.md ko nazaro se dekhke isko samajh kar.. ye backend vm pr chala kr python ko chala denge..

4. Database ke firewall me backend vm ke public ip ko allow kar denge..

Backend VM ke NSG pr 8000 port ko allow kar denge...

Backend ka endpoint: `http://publicip:8000/docs`

5. Frontend vm pr frontend code ko clone karke build krke chlwa denge..

5.1 Frontend ko clone karenge git clone
`git clone https://github.com/devopsinsiders/axion-ui.git`

5.2 cd karke axion-ui me jaenge
`cd axion-ui`

5.3 Install node 22+

5.4 Run npm install (package.json ko scan kia and nodemodules bana dia)

5.5 backend ka endpoint frontend me dal denge..

5.5 npm run build (jaise hi chala dist folder bana aur usme artifacts aa gya)

5.6 Install nginx

5.7 Remove old index.html from /var/www/html

5.8 Copy artifacts from dist to /var/www/html

5.9 Enable port in frontend vm 80

```
git clone https://github.com/devopsinsiders/axion-ui.git && cd axion-ui
curl -fsSL https://deb.nodesource.com/setup_22.x | sudo -E bash - && sudo apt install -y nodejs
npm install
npm run build
sudo rm -rf /var/www/html/* && sudo cp -r dist/* /var/www/html/
sudo systemctl restart nginx && curl -I http://localhost
```

Pehle isko ek domain se map kar denge... A record se...

ye sara kuch pehle manually karenge fir azure devops se automate kar denge..
