

Aeroplane =
Microservice Application

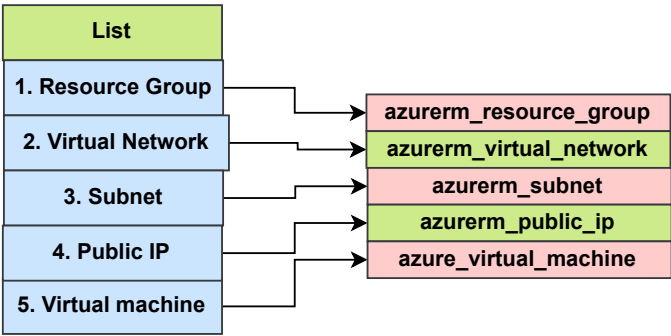

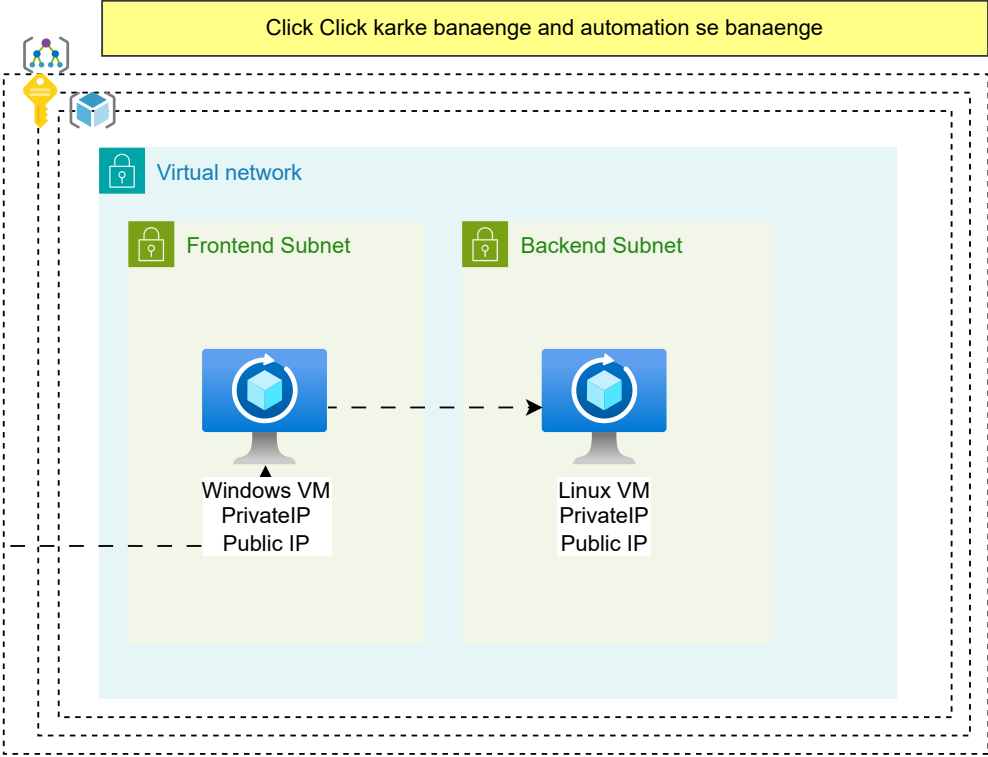

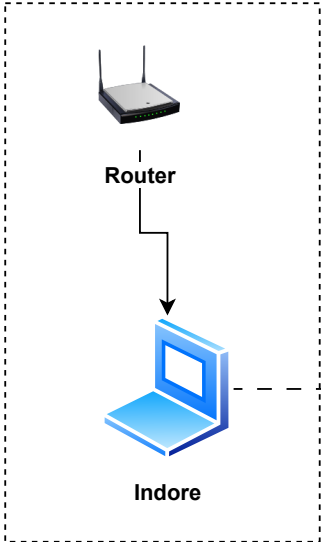

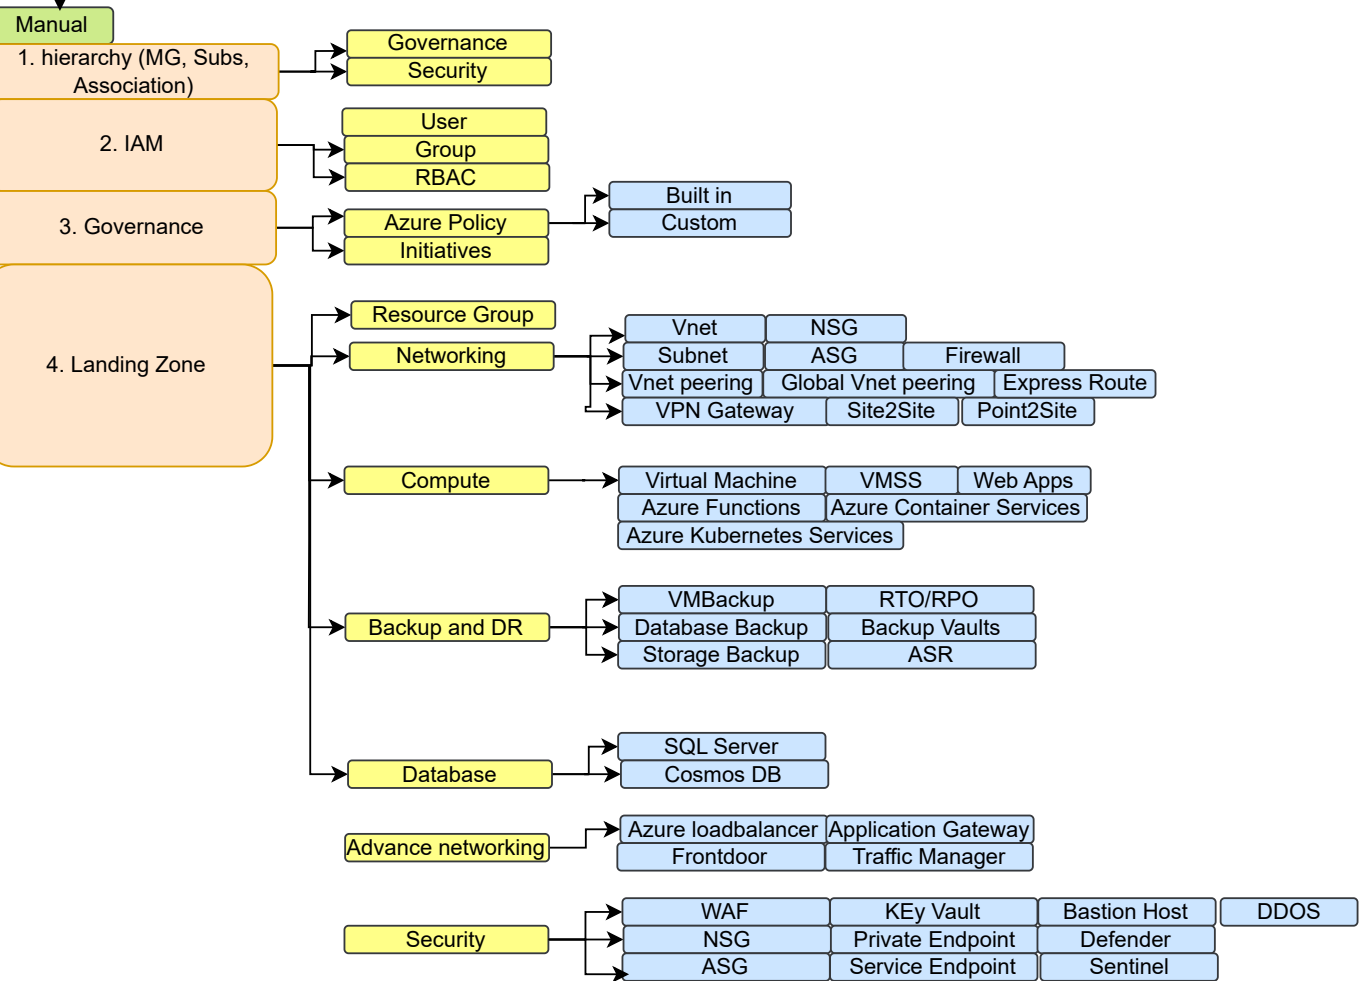

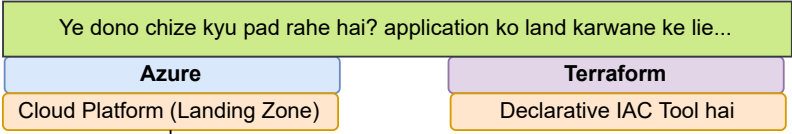

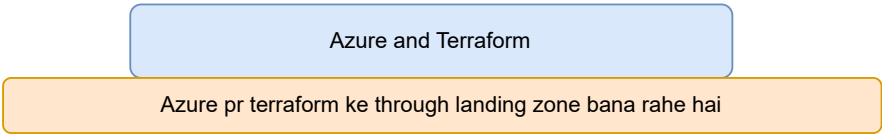

Helicopter =
Monolithic Application

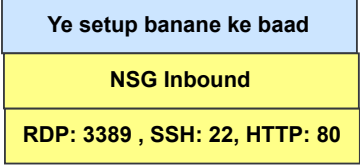

Helipad = Virtualization Landing Zone

Jaise aeroplane aur helicopter ko utarne ke lie alg alg jagah chahiye us type se alg alg application ko chalane ke lie alg alg landing zone chahiye...

Azure Aisi dukan hai waha se sab tarah ke landing zone banane ke components milte hai isliye mast hai..

1. RDP wale software ko search karenge
2. VM ka public IP dalenge and NSG ka 3389 enable nahi toh login nahi karne dega..
3. VM ka ID password Dalenge
4. Windows VM ko access kar lenge
5. Azure ke Windows VM me powershell ko search karke open karenge
6. Linux VM ko Azure ki Windows vm se ssh karke dekhenge
7. ssh username@private_ip
8. Install nginx
9. Linux VM ke public IP ko utha ke apne laptop se access karke dekhenge

VM ke saath automatic nginx nahi dal skta kyaa?
Provisioners(**jhandu**) and Custom Data(**Dhasu**) use karke bn sakta hai
