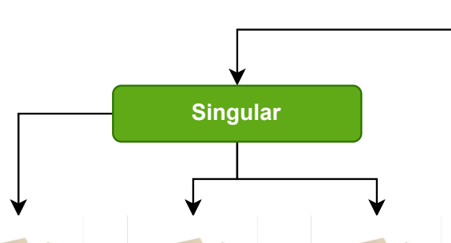
`variable "rg_name" {}`   `terraform.tfvars`   `var.rg_name`

Variables Types

Singular



- String " " — Alphanumeric
- Number — numeric
- Bool — true/false

Plural

List

Same type of elements

["laal-lipistic", "laal-lipistic", "blue-lipistic", "green-lipistic"]

Duplicate value rakh sakte hai

Set

Same type of elements with no duplicacy

["laal-lipistic", "blue-lipistic", "green-lipistic"]

Map

{
lipistic = laal
blush = pink
powder = ponds
mascara = grey
eyeliner = black
shampoo = dove
}

Looping

Count Loop

useless- iska koi use nahi karta duniya me..

Home Work

ForEach Loop

1 resource block = 1 real infra object in the cloud

```
resource "azurerm_resource_group" "rg" {
    for_each =
  name     = "rg-speaker"
  location = "West Europe"
}
```

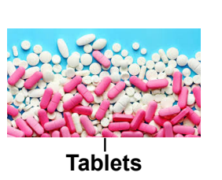
`for_each` → `set of strings` / `map`

Terraform Functions

input → **machine** → **output**

input = list → **toset( )** → **Output = Set**

toset(<input>)



Tablets

Tablet Stripping Machine

Strip

```
resource "azurerm_resource_group" "rg" {
  for_each = toset(["rg-lipistic", "rg-maskara", "rg-bindi"])
  name     = "rg-speaker"
  location = "West Europe"
}
```

each.value = "rg-lipistic"

```
resource "azurerm_resource_group" "rg["rg-lipistic"]" {
  name     = "rg-speaker"
  location = "West Europe"
}
```

Resource Group

State file

each.value = "rg-maskara"

```
resource "azurerm_resource_group" "rg["rg-maskara"]" {
  name     = "rg-speaker"
  location = "West Europe"
}
```

Resource Group

State file

each.value = "rg-bindi"

```
resource "azurerm_resource_group" "rg["rg-bindi"]" {
  name     = "rg-speaker"
  location = "West Europe"
}
```

Resource Group

State file

each.value = "rg-shampoo"

```
resource "azurerm_resource_group" "rg["rg-shampoo"]" {
  name     = "rg-speaker"
  location = "West Europe"
}
```

Resource Group

State file

ForEach(ek ek karke jaega aur block ki copy banaega) **+ Map**

What is a Map?

map is nothing but multiple key value pairs in {}

key=value
key=value
....
....
key = value
}

Key is always a string

Keys jo hoti hai vo unique

Value kisi bhi type ki ho sakti hai

lipistic_list = ["nykaa", "sugar", "lakme] ← For each

Multiple students ka names rakhna hai

student_list = ["adam", "ale", "tinku"]

Multiple students ka marks rakhna hai

marks_list = [54, 87, 98]

Multiple resource group ke naam rakhne hai?

rgs = ["rg-adam", "rg-ale", "rg-tinku"]

Rg locations

location = ["westus", "eastus", "centralindia"]

Kon se student ko kitne marks aae vo rakhna hai toh kya karenge?

students_marks = {
adam = 54
ale = 87
tinku = 94
}

Multiple resource group with locations ke naam rakhne hai?

rgs = {
"rg-adam" = "westus"
"rg-ale" = "eastus"
"rg-tinku" = "centralindia"
}

```
resource "azurerm_resource_group" "rg" {
  for_each = {
    "rg-adam"  = "westus"
    "rg-ale"   = "eastus"
    "rg-tinku" = "centralindia"
  }
  name     = "rg-chinki"
  location = "West Europe"
}
```

For each utni baar fatega jitni foreach me keys hogi..

each.key = rg-adam | each.value= "westus"

```
resource "azurerm_resource_group" "rg" {
  name     = "rg-chinki"
  location = "West Europe"
}
```

each.key = rg-ale | each.value= "eastus"

```
resource "azurerm_resource_group" "rg" {
  name     = "rg-chinki"
  location = "West Europe"
}
```

each.key = rg-tinku | each.value= "centralindia"

```
resource "azurerm_resource_group" "rg" {
  name     = "rg-chinki"
  location = "West Europe"
}
```

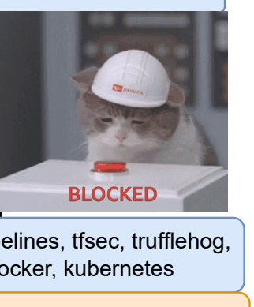
Naukri.com, Resume bdia claude ai se bnwana hai..

https://www.youtube.com/watch?v=--TiUDgJnIU

Apna present company ko block kar dena hai

Linkedin pr open to work kar dena hai

Agr dikkat lg rahi ho toh apni company ke logo ko bhi block kardo linkedin pr



Resume me Azure, Terraform, Pipelines, tfsec, trufflehog, terratest, superlinter, tflint, docker, kubernetes

Apne apne ghr me video call on karke intro record karlo atleast 5-7 min ka recording banana hai

Sikhsha sathi me video call pr mock do kisi ko bhi pakad ke..

Uske baad mock bridge me aake dena hai...

Mock wale me agar koi khatrnaak question puchta hai toh tention nahi lena hai

Terraform p deeply focus karna hai interviewer ko terraform pr rakhne ka try karna hai...

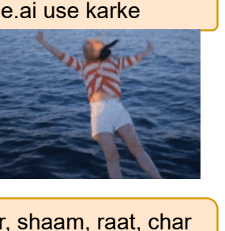
Pehle ziddi pana lana padega!

IT field aisa field hai ki interview se bach hi nahi sakte... Company join karne ke baad bhi client round ho jata hai..

Mock interview me jaenge and fail hoke aaenge..

Resume bnao mast wala claude.ai use karke

Taiyari kabhi nahi complete hoga... Direct kud jao kue me..



Naukri.com pr din me subh, dopahar, shaam, raat, char baar profile me . . lgake update karna hai..

Do curly bracket ke bich me multiple key and values map kehlata hai

{
"ashish" (key1) = "ghar se bhagal" (value1)
"aman" (key2) = "ghayal aashiq" (value2)
}

Map ke andar map = nested map

Nakshe ke andar naksha

bfs = {
"bf1" - key1 = {
"name" = "jhunjhun"
"height" = 5.2
"colour" = "brown"
} -> value1
"bf2" -> key2 = {
"name" = "runjhun"
"height" = 4.4
"colour" = "white"
} -> value2
"bf3" -> key3 = {
"name" = runmun
"height" = 8.5
"colour" = "wheatish"
} -> value3
"bf4" -> key4 = {
"name" = tinku
"height" = 2.6
"colour" = "oliveskin"
} - value4
}

storage_accounts = {
"sa1" - key1 = {
name = each.key
location = each.value
resource_group_name = ""
account_tier = "Standard"
account_replication_type = "GRS"
} -> value1
"sa2" -> key2 = {
name = each.key
location = each.value
resource_group_name = ""
account_tier = "Standard"
account_replication_type = "GRS"
} -> value2
}

Map

Ek aisa data type hai jiske andar multiple chize rakh sakte hai..

{
key = value
key = value
key = value
}

key is always a string

Value kuch bhi ho sakti hai

String **Number** **Bool** **list** **Map**

rgs = {
rg1 = "eastus"
rg2 = "westus"
rg3 = "centralindia"
}

bfs = {
bf1 = "chotu"
bf2 = "lambu"
}

rgs = {
sa1 = {
name = "tinku"
location = "westus"
rg_name = "rg-apple"
}
sa2 = {}
sa3 = {}
}

Foreach ko jaise hi ek map milta hai toh vo block ki copy bana na shuru karta hai...

Jo map usko mila hai uske andar top level pr jitni keys hai utni copy banata hai..

```
resource "azurerm_storage_account" "storage_accounts" {
  for_each                 = var.storage_accounts
  name                     =
  location                 =
  resource_group_name      =
  account_tier             =
  account_replication_type =
}
```

```
storage_accounts = {
  sa1 = {
    name                     = "tinkustg"
    location                 = "eastus"
    resource_group_name      = "apple-rg"
    account_tier             = "Standard"
    account_replication_type = "GRS"
  }
  sa2 = {
    name                     = "pinkustg"
    location                 = "westus"
    resource_group_name      = "banana-rg"
    account_tier             = "Standard"
    account_replication_type = "GRS"
  }
}
```

Iteration 1

```
  sa1 = {
    name                     = "tinkustg"
    location                 = "eastus"
    resource_group_name      = "apple-rg"
    account_tier             = "Standard"
    account_replication_type = "GRS"
  }
```

each.key = sa1

each.value= {
name = "tinkustg"
location = "eastus"
rg_name = "apple-rg"
account_tier = "Standard"
art = "GRS"
}

```
resource "azurerm_storage_account" "storage_accounts" {
  name                     = each.value.name
  location                 = each.value.location
  resource_group_name      = each.value.rg_name
  account_tier             = each.value.account_tier
  account_replication_type = each.value.art
}
```

Iteration 2

```
  sa2 = {
    name                     = "pinkustg"
    location                 = "westus"
    resource_group_name      = "banana-rg"
    account_tier             = "Standard"
    account_replication_type = "GRS"
  }
```

each.key = sa2

each.value= {
name = "pinkustg"
location = "westus"
resource_group_name = "banana-rg"
account_tier = "Standard"
account_replication_type = "GRS"
}

```
resource "azurerm_storage_account" "storage_accounts" {
  name                     =
  location                 =
  resource_group_name      =
  account_tier             =
  account_replication_type =
}
```

Code

```
resource "azurerm_resource_group" "resource_groups" {
  for_each = {
  rana-rg   = "eastus",
  bahana-rg = "westus",
  pinku-rg  = "centralus"
}

  name     = each.key
  location = each.value
}
```

Input

```
rg_names = {
  rana-rg   = "eastus",
  bahana-rg = "westus",
  pinku-rg  = "centralus"
}
```

Iteration 1

`rana-rg   = "eastus"`

each.key = rana-rg

each.key = eachus

```
resource "azurerm_resource_group" "resource_groups" {
  name     = rana-rg
  location = eastus
```

Iteration 2

`bahana-rg = "westus"`

each.key = bahan-rg

each.key = westus

```
resource "azurerm_resource_group" "resource_groups" {
  name     = bahan-rg
  location = westus
```

Iteration 3

`pinku-rg = "centralus"`

each.key = pinku-rg

each.key = centralus

```
resource "azurerm_resource_group" "resource_groups" {
  name     = pinku-r
  location = centralus
```

Resource group and storage account 30 min me khatm kar dena hai khud se..
Next 7 days me aur kuch idhr udhr dekhna bhi nahi hai..
