

Resource group and storage account ke do alg folder bana ke
Kam se kam 10 baar practice karna hai..
Aur 10 aadmi ko screen share karke padana hai..

10 resource azure ka padne ke baad fir gemini cli/claude code se code likhna start karenge..

Agle 2 weeks plan
pehla 10 resource haath se banaenge 15 din me
Uske baad ke sab resource AI se banaenge 2-3 din me sb bana denge
Atul sir
resume+naukri.com+linkedin + 5 me fail.. uske baad rukna hai..
intro+usecase Sikhsha Sathi group me padana
Notes proper hona chahiye apn apna

Terraform me kya kya bacha hai	
Modules	Data Block
Local Block	Dynamic Block
Conditional+Dynamic Block	Terraform Functions
Output Block	Generic Modules
Provisioners/Custom_data	Terraform Workspaces
Taint	Lifecycle Block
Multisubscription Deployment	Optional Attributes
Use of Count Loop in Production	

Landing Zone ka zarurat kyu pada?
Kya hota hai? Hai hi kyu?

What? Why? How?

Migration
On Prem to Cloud(Azure, AWS, GCP)
Why Azure/AWS/GCP?
One Cloud to Another Cloud
Azure to AWS, Azure to GCP
GCP to Azure, GCP to AWS
AWS to Azure, AWS to GCP
Migration of Infra to PAAS on same cloud(webapp, acs, aks(containerization), functions)
Virtualization to Containers (AKS, ACS)
Virtualization to Serverless
Virtualization to Web App
Virtualization to OpenShift

Junior ho ya senior, Code likhna tuccha kaam hai
System design important hai

Landing Zone is very very important + Gen AI

Grouping ko bandh ke china hai....Agar nahi bandh paa rahe toh thoda sa effort dalke dosti banao mast..

Mast video call pr aise nach nach ke bulao sabko..

Greenfield = Ek dum taza taza.. new application
Brownfield -> Onprem pr already chl raha hai, usko utha ke cloud pr deploy karna hai..

Migration Phases
1. Discovery and assessment Phase
Application and Infra Both
1.1 Business Owners, Business Criticality
1.2 Downtime Tolerance
1.3 Developer Stack
1.4 Which Databases?
1.5 Traffic Pattern
2. Infrastructure Discovery
1.1 VMware, Hypervisor?
1.2 Address Space ?
1.3 Firewall, Domains, Certificate ?
1.4 Backup, DR, Monitoring ?

2 Migration Strategy
Lift and Shift
Rehost, Replatform
Refactor, Retire, Retain, Repurchase
3. Azure Landing Zone Design Phase
HLD/LLD
4. Implementation Phase
4.1 Infra as a Code - Terraform
4.2 Push Code to SCM with Trunk based Strategy
4.3 CI/CD Pipelines with DevSecOps Tools

modules
azurerm_resource_group
azurerm_virtual_network
azurerm_virtual_machine
azurerm_subnet
environments
nonprod
main.tf, provider.tf, variables.tf
prod
main.tf, provider.tf, variables.tf

Keywords: Landing Zone, Governance, Identity and Access Management, networking, Network Connectivity, Compute, Loadbalancing, Security, Backup, DR, Terraform IAC, Database Migration, App Migration, Replication, Testing, Cutover Sheet, Production Deployment, Monitoring, Right Sizing, Cost Optimization, modernization

1. Hierarchy Setup Simple Hub and Spoke	5. Compute Workload VM, VMSS, Web App, App Services, Azure Functions ACS, AKS	8. Backup VM Backup DB backup Storage Account Backup
2. Governance and Compliance Azure Policy Builtin and Custom policies and Initiatives	6. Database and Storage Setup PostgreSQL, SQL Server, MySQL	9. Disaster Recovery Storage Account Backup RTO/ RPO Active/Active , Active/Passive Failover Testing
3. Identity and Access Management (IAM) Entra ID Setup, Users, groups AD Sync, On Prem AD Setup RBAC, MFA, PIM Role	7. Security Architecture Zero Trust Application Gateway with WAF, Firewalls NSG, ASG Bastion, KeyVault, SSL Sentinel, Defender Private Endpoint, managed identity	10. Cost Optimization Identify oversized and reduce Shutdown schedule Right Sizing Storage Hot and Cool decisions
4. Networking Setup Hub and Spoke Networking Model Hub Vnets, Spoke Vnets, Vnet peering VPN Gateway -> Site2Site, Express Route Application Gateway, Frontdoor, LoadBalancers, Traffic Managers	7. Monitoring Log Analytics Workspaces Application Insights Azure Monitor Prometheus/Grafana
