

VM ek khali dabba hota hai uspe NIC connect karna padta hai..

Ek network ke andar me alg alg subnet me vm hai, to ek dusre se baat kar sakta hai

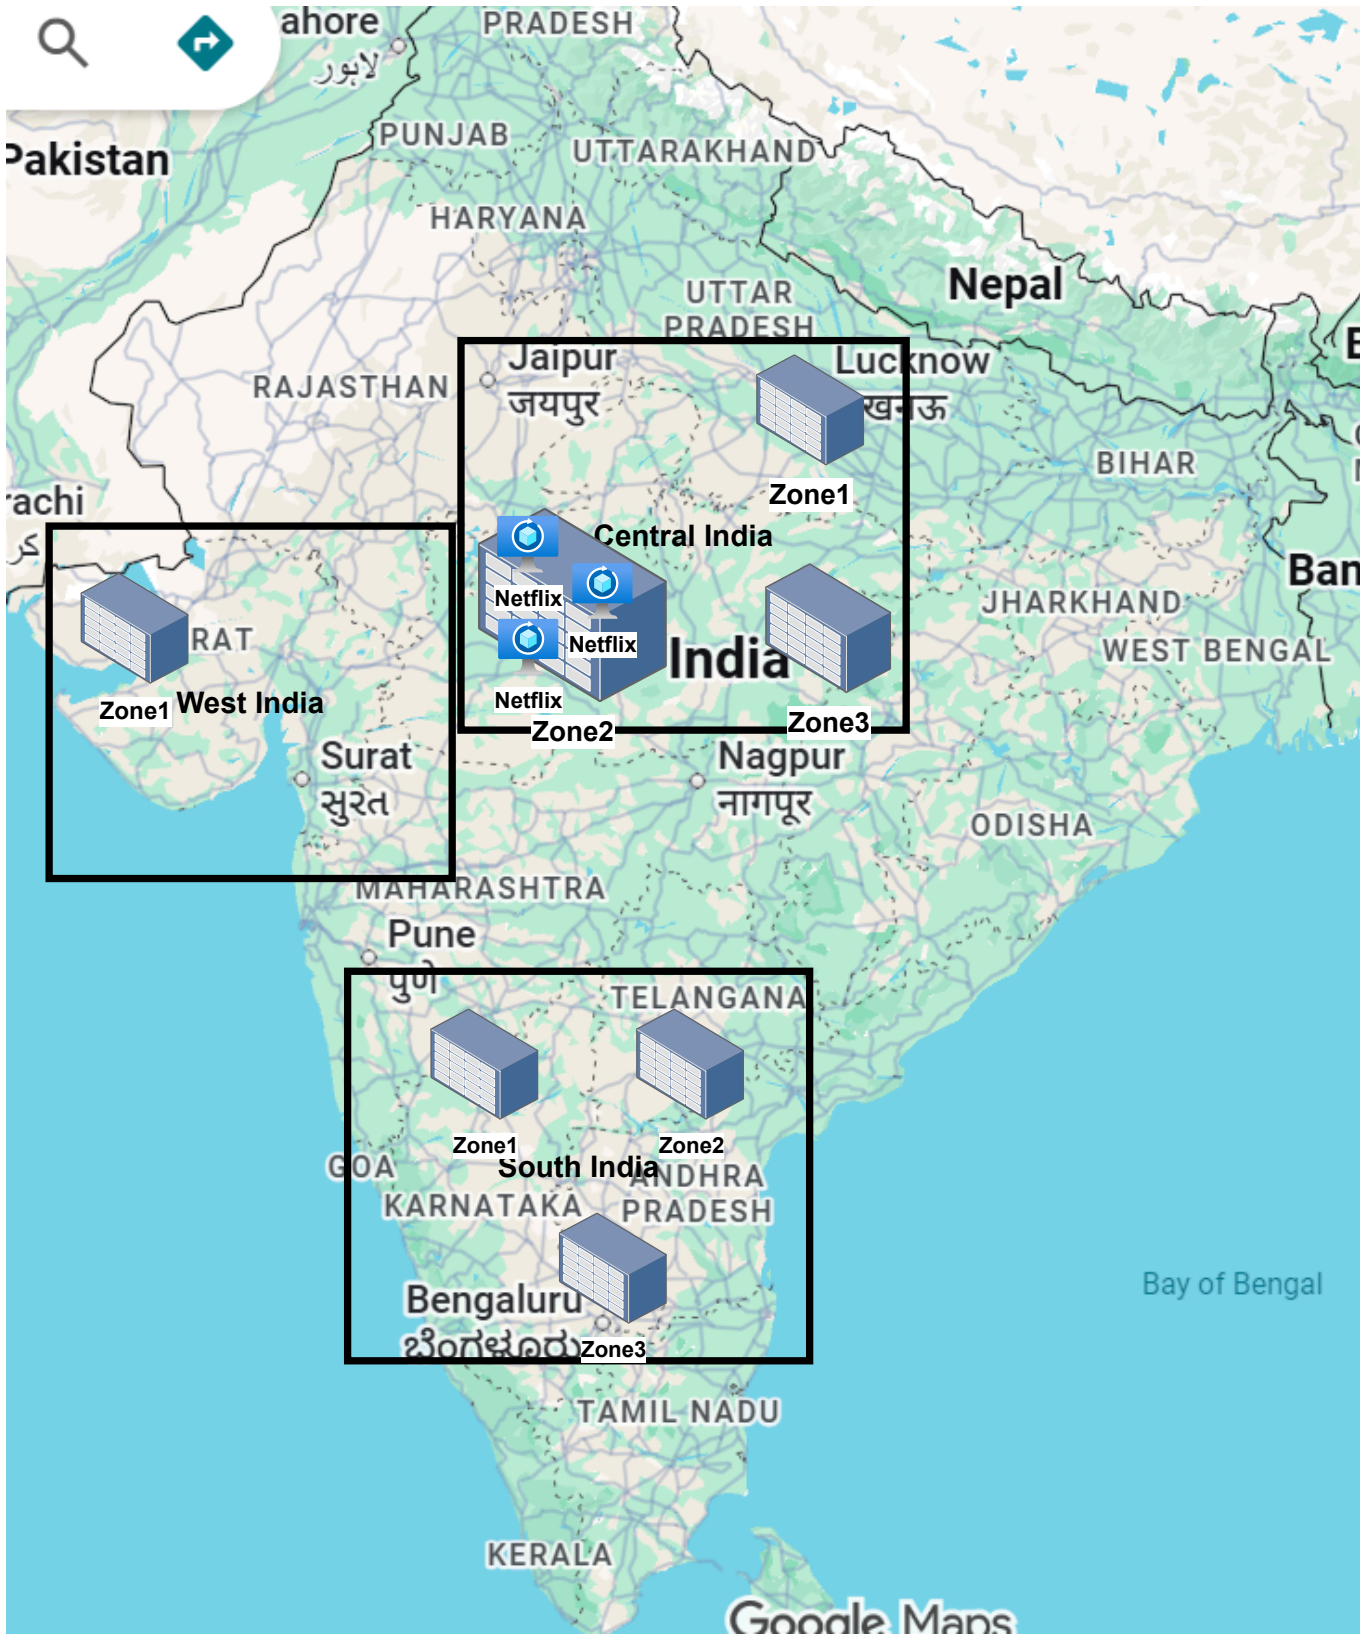

do different network hai aur usme baate karna hai toh usme vnet peering karwana pdega..
Vnet peering karwane ke baar hi vo vms baat kar paegi..

Single VM se High Availability ho jati hai... esa nahi hota hai..

High Availability hmesha multiple VM's se hi banegi..

Availability Zone	Availability Set
Different Datacenter	Same Datacenter
Multiple VM's ko alg alg jagah pr distribute karne ke lie hote hai..	

Ek VM hai toh availability ki guarantee nahi hai..
